Connecting Windows 8 to DuqNet

Prior to configuring your machine for DuqNet wireless you need to initialize your MultiPass account (credentials that you will be using for wireless). To do so, visit http://www.duq.edu/multipass and click the link for Initialize Your MultiPass. Once you've followed the on-screen prompts and have initialized your account you can proceed with the following instructions. Keep in mind that you will use this password that you've just created to setup your wireless connection.

Review Duquesne's Wireless Airspace Policy

Connecting Windows 8 to DuqNet

Manually connect to a wireless network.

Enter only the following:
Network name: DuqNet
Security type: WPA2-Enterprise
Encryption type: AES
Next and then select Change connection settings.
Windows 8 DuqNet Setup

Click the Security tab. Under Network Authentication Method, select Protected EAP (PEAP).

Click settings.
Windows 8 DuqNet Setup

From the Protected EAP Properties window
Uncheck Validate the server's certificate
Uncheck Connect to these servers
Select Authentication Method: Secured Password (EAP-MSCHAP v2) and click Configure.

Updated on 3/20/2018
Uncheck Automatically use my Windows Logon name and password (and domain if any), and click OK.
Click OK in the Protected EAP Properties window.
Select the Advanced settings in the Wireless Network Properties window. In the Advanced settings window:
Check Specify authentication mode
Select User authentication from the dropdown menu
Windows 8 DuqNet Setup

Click OK and then close any open windows and try connecting to DuqNet. You should be prompted for a username and password.

Enter your MultiPass username and password. Click OK.

Once complete you should now be connected to DuqNet.

If you have any issues please contact the CTS Help Desk at 412-396-4357.
