Duquesne University’s Center for Pharmacy Care can help you get healthy and stay healthy with our convenient and economical screenings. These services can alert you to possible health risks and help you take control of your well-being.

We offer individual appointments in our office on Fifth Avenue (right across from the CONSOL Energy Center), or we can help employers keep their employees healthy and productive by offering on-site screenings at the low cost of $85 per pharmacist per hour, plus screening charges.
Screenings offered and associated costs are:

**OSTEOPOROSIS SCREENING**
$3/SCREENING
This screening measures the bone density of the heel to assess risk for osteoporosis, a disease where bones become fragile and more likely to break or fracture due to loss of bone density.

**BLOOD PRESSURE ASSESSMENTS**
$1/SCREENING
With the increasing prevalence of cardiovascular disease, it is more important than ever to have your blood pressure regularly assessed. Measuring your blood pressure and keeping a record of the measurements will show you and your doctor how much your blood pressure may change over time.

**CHOLESTEROL SCREENING**
$21/SCREENING (fasting)
$18/SCREENING (non-fasting)
A single finger stick can provide a wealth of information about your health. We measure total cholesterol, HDL, LDL, triglycerides and glucose in a single test. The results of these tests help us to determine your risk for developing cardiovascular disease or diabetes. Already have a cardiovascular diagnosis? It’s even more important for you to have these checked regularly to assess the effectiveness of your current treatment.

**BODY COMPOSITION ANALYSIS**
$2/SCREENING
The Tanita Body Composition Analyzer provides values such as your body mass index, fat %, basal metabolic rate, total body water, fat mass and free fat mass. It also gives individualized desirable ranges. Our pharmacist can discuss your weight loss goals and lifestyle changes based on your results.

**THYROID STIMULATING HORMONE (TSH)**
$21/SCREENING (availability varies)
An individual can have a thyroid hormone level checked through a small sample of blood obtained by a finger stick. Our pharmacists will be able to obtain a sample and check the level at which your body is producing the thyroid hormone.

**ANEMIA SCREENING**
$6/SCREENING (availability varies)
A small blood sample from a finger stick can tell us your hemoglobin level to assess anemia risk and severity. Low hemoglobin is an indication of anemia. Your doctor can perform additional tests to determine the cause and best treatment for anemia. If you already have a diagnosis of anemia, it is important to get your hemoglobin levels checked regularly to assess the effectiveness of your current treatment.

**SPIROMETRY SCREENING**
$6/SCREENING
The KoKo Spirometer is a screening tool for patients with asthma or those wishing to be screened for the disease. It assesses pulmonary function through a variety of tests to give the pharmacist a snapshot of how well your lungs are working. Pharmacists are able to assess therapy for COPD in asthma patients when using the KoKo Spirometer.

**CARBON MONOXIDE SCREENING**
$3/SCREENING
The carbon monoxide screening measures the amount of carbon monoxide in an individual’s breath. This test is typically used to show visible proof of the damaging levels of carbon monoxide, as well as a motivational tool in smoking cessation programs.

**VACCINATIONS**
PRICING VARIES PER VACCINE
