Supply Chain Management

What is Supply Chain Management (STEM)?

Supply chain management (SCM) involves the coordination of business disciplines that are required to manage the flow of goods, services, and information needed to produce and deliver products and services to customers. Effective supply chain management improves business performance and provides value to customers.

Why study Supply Chain Management at the Palumbo-Donahue School of Business?

One of the fastest growing business disciplines, SCM provides a competitive advantage for corporations, and our SCM program incorporates the best-in-class methods, concepts and tools that companies need to gain that competitive advantage. Organizations are placing great value on the ability of new hires to understand the connections among disciplines that our SCM program teaches.

Majoring in SCM will broaden your perspective on business, helping you to view organizations holistically, so you can see how decisions made in one part of the organization affect stakeholders throughout the supply chain. This understanding is especially important in the global economy in which SCM graduates will one day be managers.

The SCM faculty has a close association with regional and national SCM executives, which provides many opportunities for internships and full-time positions. The success of SCM alumni also provides students with networking opportunities for career enhancement.

SCM majors are also given the opportunity to experience the supply chain outside of the classroom through a variety of extracurricular activities, including the Duquesne Supply Chain Council, our mentoring program, and the Student Chapter of ACSM participation in local SCM professional society meetings and tours of local companies.

Career Prospects

Every business has a supply chain, and graduates can begin their careers in industry, government, consulting, service providers or SCM information systems. The breadth of disciplines included in SCM provides a number of opportunities for starting positions in the field, such as forecast analyst, production scheduler, material planner, buyer, operations analyst, inventory planner, transportation analyst/planner, warehouse planner, customer service representative and SCM systems analyst.

Recent SCM graduates have found positions in a variety of major corporations, including US Steel, Alcoa, PPG, ThermoFisher Scientific, UPMC, Wesco, Amazon, Kraft Heinz, Nestle, Dick's Sporting Goods, J.B. Hunt, IBM, MSA, and PNC.

Supply Chain Management as a Value-Added Second Major

The SCM curriculum compliments a wide number of other business majors. In particular, students who combined the SCM major with majors in information systems management and marketing have been highly successful.

Courses

Course	Prerequisites	Semesters Offered
BUSINESS CORE/REQUIRED COURSES (54 Credits) <i>This information is subject to change.</i>		
REQUIRED COURSES (18 Credits)

Graduation Requirements

Students must earn a minimum overall GPA of a 2.0.

A Minor in Supply Chain Management

Students can earn a minor in Supply Chain Management by completing SCMG 375, 385, and any two of the following three courses: SCMG 472, 474, and 480.

It is the responsibility of the student to know both University-wide graduation requirements and those of the major field of study and to meet all requirements satisfactorily for graduation.
