John Stolz is a Professor in the Department of Biological Sciences and Director of the Center for Environmental Research and Education at Duquesne University. He received his BS degree in biology at Fordham University in 1977 and earned his PhD at Boston University in 1984 in microbial ecology and evolution. He was an NRC Post doctoral fellow at the NASA Jet Propulsion Laboratory and the Department of Geology and Planetary Sciences, California Institute of Technology, and an NSF Postdoctoral Fellowship in Plant Biology in the Biochemistry Department at the University of Massachusetts, Amherst. His main research interests are in the community structure of microbial mats and stromatolites; the microbial metabolism of metals and metalloids including arsenic, selenium, and nitrate; and water quality impacts of unconventional shale gas extraction. Dr. Stolz has published 94 journal articles, 39 book chapters, and author-edited two books.
