Pillars of Sustainability

After thinking about the topic, “Building a Sustainable World,” I first began by analyzing what the word “sustainable” truly means. Sustainability is the ability for something to be maintained at a certain level. Our world thrives on sustainability and without its core aspects, there will be negative effects. Through research, I had come up with four main “pillars” that hold up what sustaining society would entail. These pillars are social sustainability, economic sustainability, human sustainability, and environmental sustainability.
